

## EQUIPMENT ENCLOSURE

### ABSTRACT

An equipment enclosure having a cabinet and a fan. The cabinet houses equipment, and the fan cools the equipment. The equipment enclosure also includes at least one vent 5 substantially perpendicular to air flow through the fan. This substantially perpendicularly arranged vent reduces atmospheric/ocean breezes from entering the equipment enclosure and overheating the equipment. The equipment enclosure may also include at least one louvered vent having an open position and a closed position, the open position flowing air to or from the fan, and the closed position reducing the flow of air to or from the fan.
